

# Community Energy Savings Day

Conserve power, save money,  
help the community.

## How can you help?

High electricity demand is expected today as temperatures continue to fall.

In response, a Community Energy Savings Day has been called.

You can help by using less electricity.

### Lower the thermostat to 68 degrees

Turning down the thermostat by one degree can reduce energy usage by as much as 3 percent.

### Turn down your water heater

Most water heaters come preset at 140 degrees, which is higher than needed. Turn it down to 120 degrees to save energy.

### Avoid using space heaters

Electronic space heaters burden your home's energy output and can run up your monthly bill.

### Turn off and unplug

Turn off lights and electronics that are not in use, and unplug things like cellphone chargers and coffee makers.
