

# StreetScan

## What is that? What is it doing?!

Thanks for taking an interest in the investment taking place in your municipality to improve the road network.

To help improve the conditions of our streets, we are partnering with **StreetScan**, a Massachusetts-based company that has assessed streets in over 300 communities in North America.

**StreetScan** employs vehicle-mounted sensing technology to assess road conditions in normal traffic flow. StreetScan collects LiDAR/imagery data and utilizes 360° imaging technology to measure road defects, such as cracking, bumps, and potholes. This data helps the municipality to identify and prioritize repair needs.
