

Here's the latest update on Isaias for Yankeetown. I've highlighted what has changed since yesterday morning so you can see what needs attention today.

CHANGES WITH THIS UPDATE

- Isaias is now at 110 mph, up from 80 mph in yesterday's briefing. This update uses the corrected 7 a.m. Central / 8 a.m. Eastern Advisory 11A issued October 9.
- The center track is little changed. Landfall is expected tonight or early Saturday, and preparations in hurricane and surge warning areas should be completed within the next few hours.
- The 4 a.m. forecast raises today's peak to 120 mph. Some weakening before landfall is expected, but that depends on the timing of wind shear. A delay could bring a stronger hurricane ashore.

WHAT THIS MEANS FOR YANKEETOWN

Coastal Levy remains under a Storm Surge Watch, with 2-4 feet possible in surge-prone areas through Saturday morning. Local winds remain below tropical storm force. The storm's center remains west of the community, but that does not remove the coastal flood risk.

Our provisional assessment remains SAVCON 3, Prepare. Protect flood-prone assets, confirm staffing and contacts, and check drainage, access and response plans.

SAVCON is our proprietary local readiness scale, based on the likelihood and severity of impacts. It is not a hurricane category or an evacuation order. The attached report explains all five levels and includes the current track, watches and warnings, corrected peak surge graphic, tropical outlook and rainfall map.

The rainfall map covers October 9-14. Current local forecasts are distinguished from the broader regional rainfall corridor. A verified local seven-day curve and recent observed rainfall total were unavailable, so older totals are not carried forward. Surge ranges are conditional heights above normally dry ground somewhere within coastal segments, not guaranteed property depths.

We are monitoring the situation and prepared to mobilize immediately once conditions warrant. Please call if you have questions or concerns, or let us know of any immediate needs, flooding, damage or access issues so we can coordinate support.

Thank you,
Scott

WEATHER & READINESS

YANKEETOWN FLORIDA

Rainfall. Coastal impacts.
Tropical development. Ready to respond.

OCTOBER 9, 2026 | 7 AM CDT / 8 AM EDT UPDATE | FLORIDA

CHANGES WITH THIS UPDATE

Isaias is now 110 mph, up from 80 mph yesterday morning. Landfall is expected tonight or early Saturday. Coastal Dixie now has a Surge Warning; Coastal Levy remains under a Surge Watch. Finish warning-area preparations within hours.

SAVCON 3 / 5 | PREPARE

SAVCON = Savinacious Condition: our proprietary scale of local impact severity and likelihood.

PREPARE: Confirm staffing, protect records and assets, check access and mobilization plans, and follow official directions.

IMPACT REPORTS & LOCAL FOCUS

CURRENT WATCHES & WARNINGS

STORM SURGE WATCH

Coastal Levy surge: 2-4 ft through Saturday morning.
Local wind remains below tropical storm force.

Surge watch and regional range are unchanged.
Confirm contacts, protect flood-prone assets, prepare for access impacts and follow local evacuation instructions.

- 1 Ready: stay ready, 2 Monitor: follow updates.
- 3 Prepare: ready people, assets and response.
- 4 Protect: shelter safely, 5 Emergency: follow evacuation orders.

TROPICAL UPDATE & SEVEN-DAY OUTLOOK

8 AM EDT OUTLOOK | ISAIAS ACTIVE

No additional tropical cyclone formation expected in seven days.
Isaias remains active.

TROPICAL SUMMARY

4 AM forecast: track little changed; peak raised to 120 mph today. Expected pre-landfall weakening depends on shear timing. A delay could bring a stronger hurricane ashore. Impacts extend beyond the cone.

RAINFALL | CURRENT OUTLOOK

NWS coastal Levy: additional 1-3 inches, locally higher. Regional NHC corridor: 4-8 inches, locally 15, through the weekend; this is not a city-specific total. Attached WPC map covers October 9-14. A current local seven-day curve and recent observed total were unavailable; amounts already fallen are not added.

THE WEEK AHEAD | OCTOBER 9-16

TODAY

Prepare for repeated rain, coastal flooding and access impacts.

TONIGHT-SAT

Tropical rain and coastal hazards depend on track; follow alerts.

SUN-TUE

Rain should ease early next week; check assets when safe.

TRACK & WATCHES / WARNINGS

7 AM CDT OCTOBER 9 | ADVISORY 11A

STORM SURGE WATCH

Coastal Levy surge: 2-4 ft through Saturday morning. Local wind remains below tropical storm force.

Local alerts checked this morning, October 9. SAVCON 3: Prepare.

The cone shows center-track uncertainty. Wind, surge and rainfall can extend beyond it.

Follow local evacuation and shelter instructions. We are monitoring and prepared to mobilize immediately once conditions warrant.

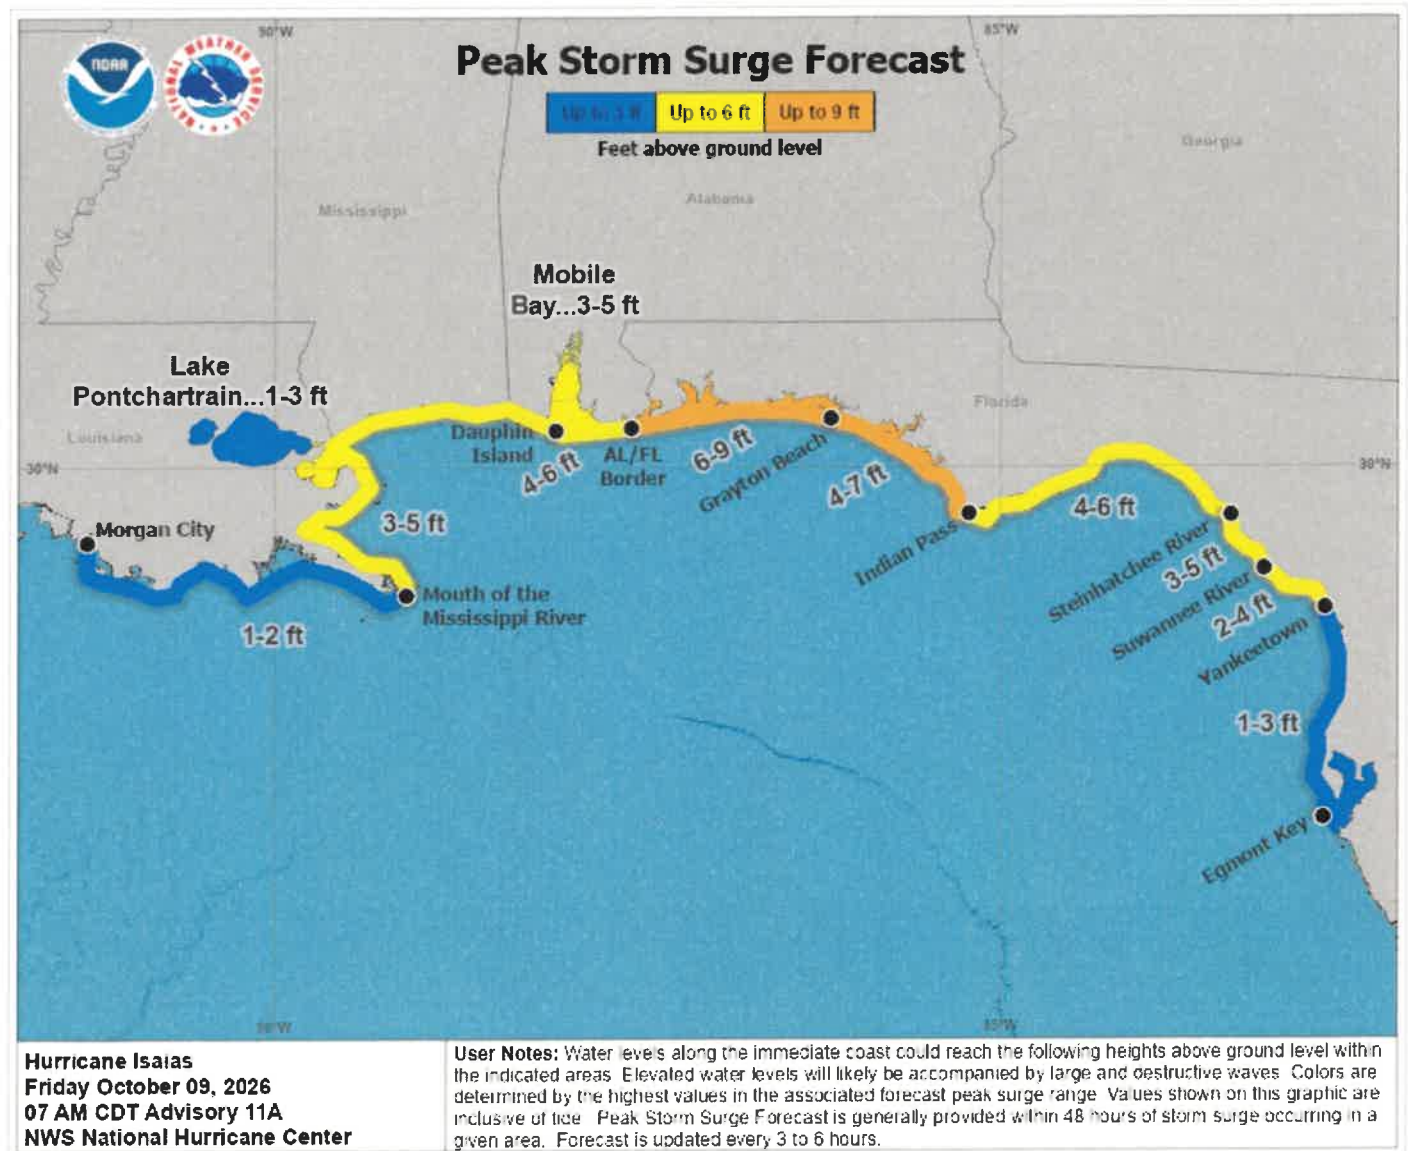

PEAK STORM SURGE

7 AM CDT OCTOBER 9 | ADVISORY 11A CORRECTED

STORM SURGE WATCH

Coastal Levy surge: 2-4 ft through Saturday morning. Local wind remains below tropical storm force.

Local alerts checked this morning, October 9. SAVCON 3: Prepare.

Heights are above normally dry ground somewhere within each coastal segment. They are not guaranteed property depths. Waves and tide affect impacts.

Follow local evacuation and shelter instructions. We are monitoring and prepared to mobilize immediately once conditions warrant.

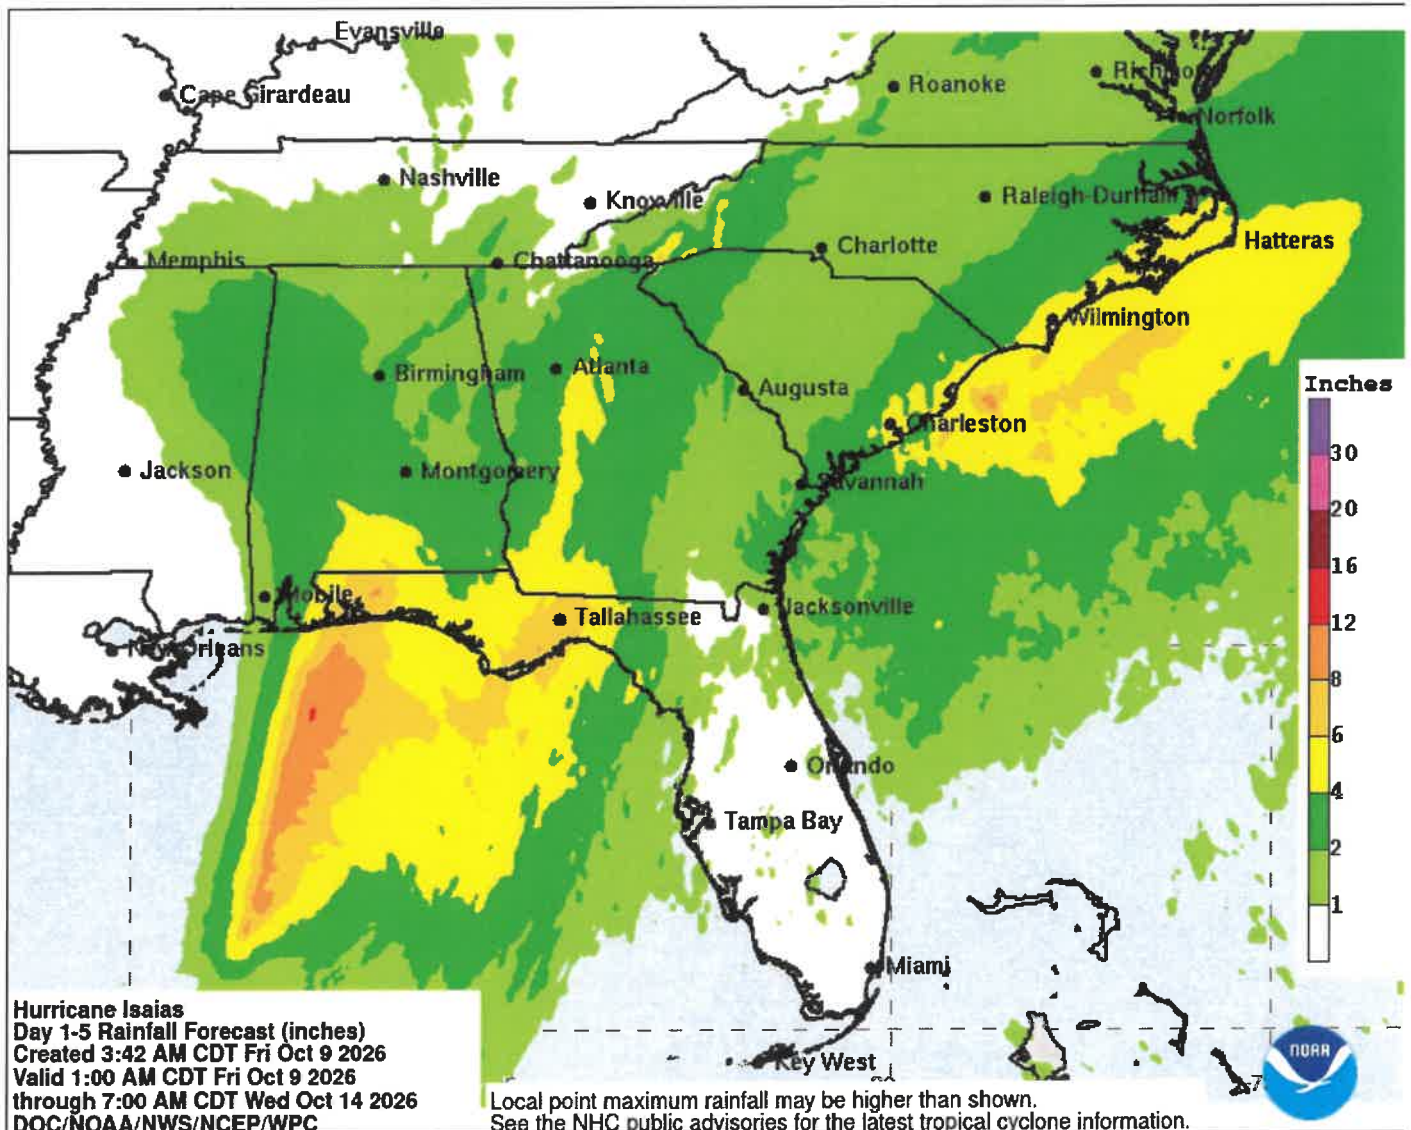

FORECAST RAINFALL

WPC CREATED 3:42 AM CDT OCTOBER 9

STORM SURGE WATCH

Coastal Levy surge: 2-4 ft through Saturday morning. Local wind remains below tropical storm force.

Local alerts checked this morning, October 9. SAVCON 3: Prepare.

Forecast accumulation only: 1 AM CDT October 9 through 7 AM CDT October 14. This is a five-day map, not a seven-day local total. Observed rain already fallen is not included.

Follow local evacuation and shelter instructions. We are monitoring and prepared to mobilize immediately once conditions warrant.
