

Tropical Weather Briefing

Issued: Thu, Oct 8, 2026 6:30 AM

OVERVIEW: Hurricane Isaias currently over the southern Gulf is expected to move northward toward the northern Gulf Coast region through Friday producing numerous impacts to the local area. The stalled frontal boundary will remain over the area today with heavy rainfall possible and there is a Marginal Risk (5-14%) of excessive rainfall leading to flooding for parts of the area through Saturday. Additionally, swells from Isaias will move ashore area beaches with large seas and dangerous rip currents likely Friday into Saturday.

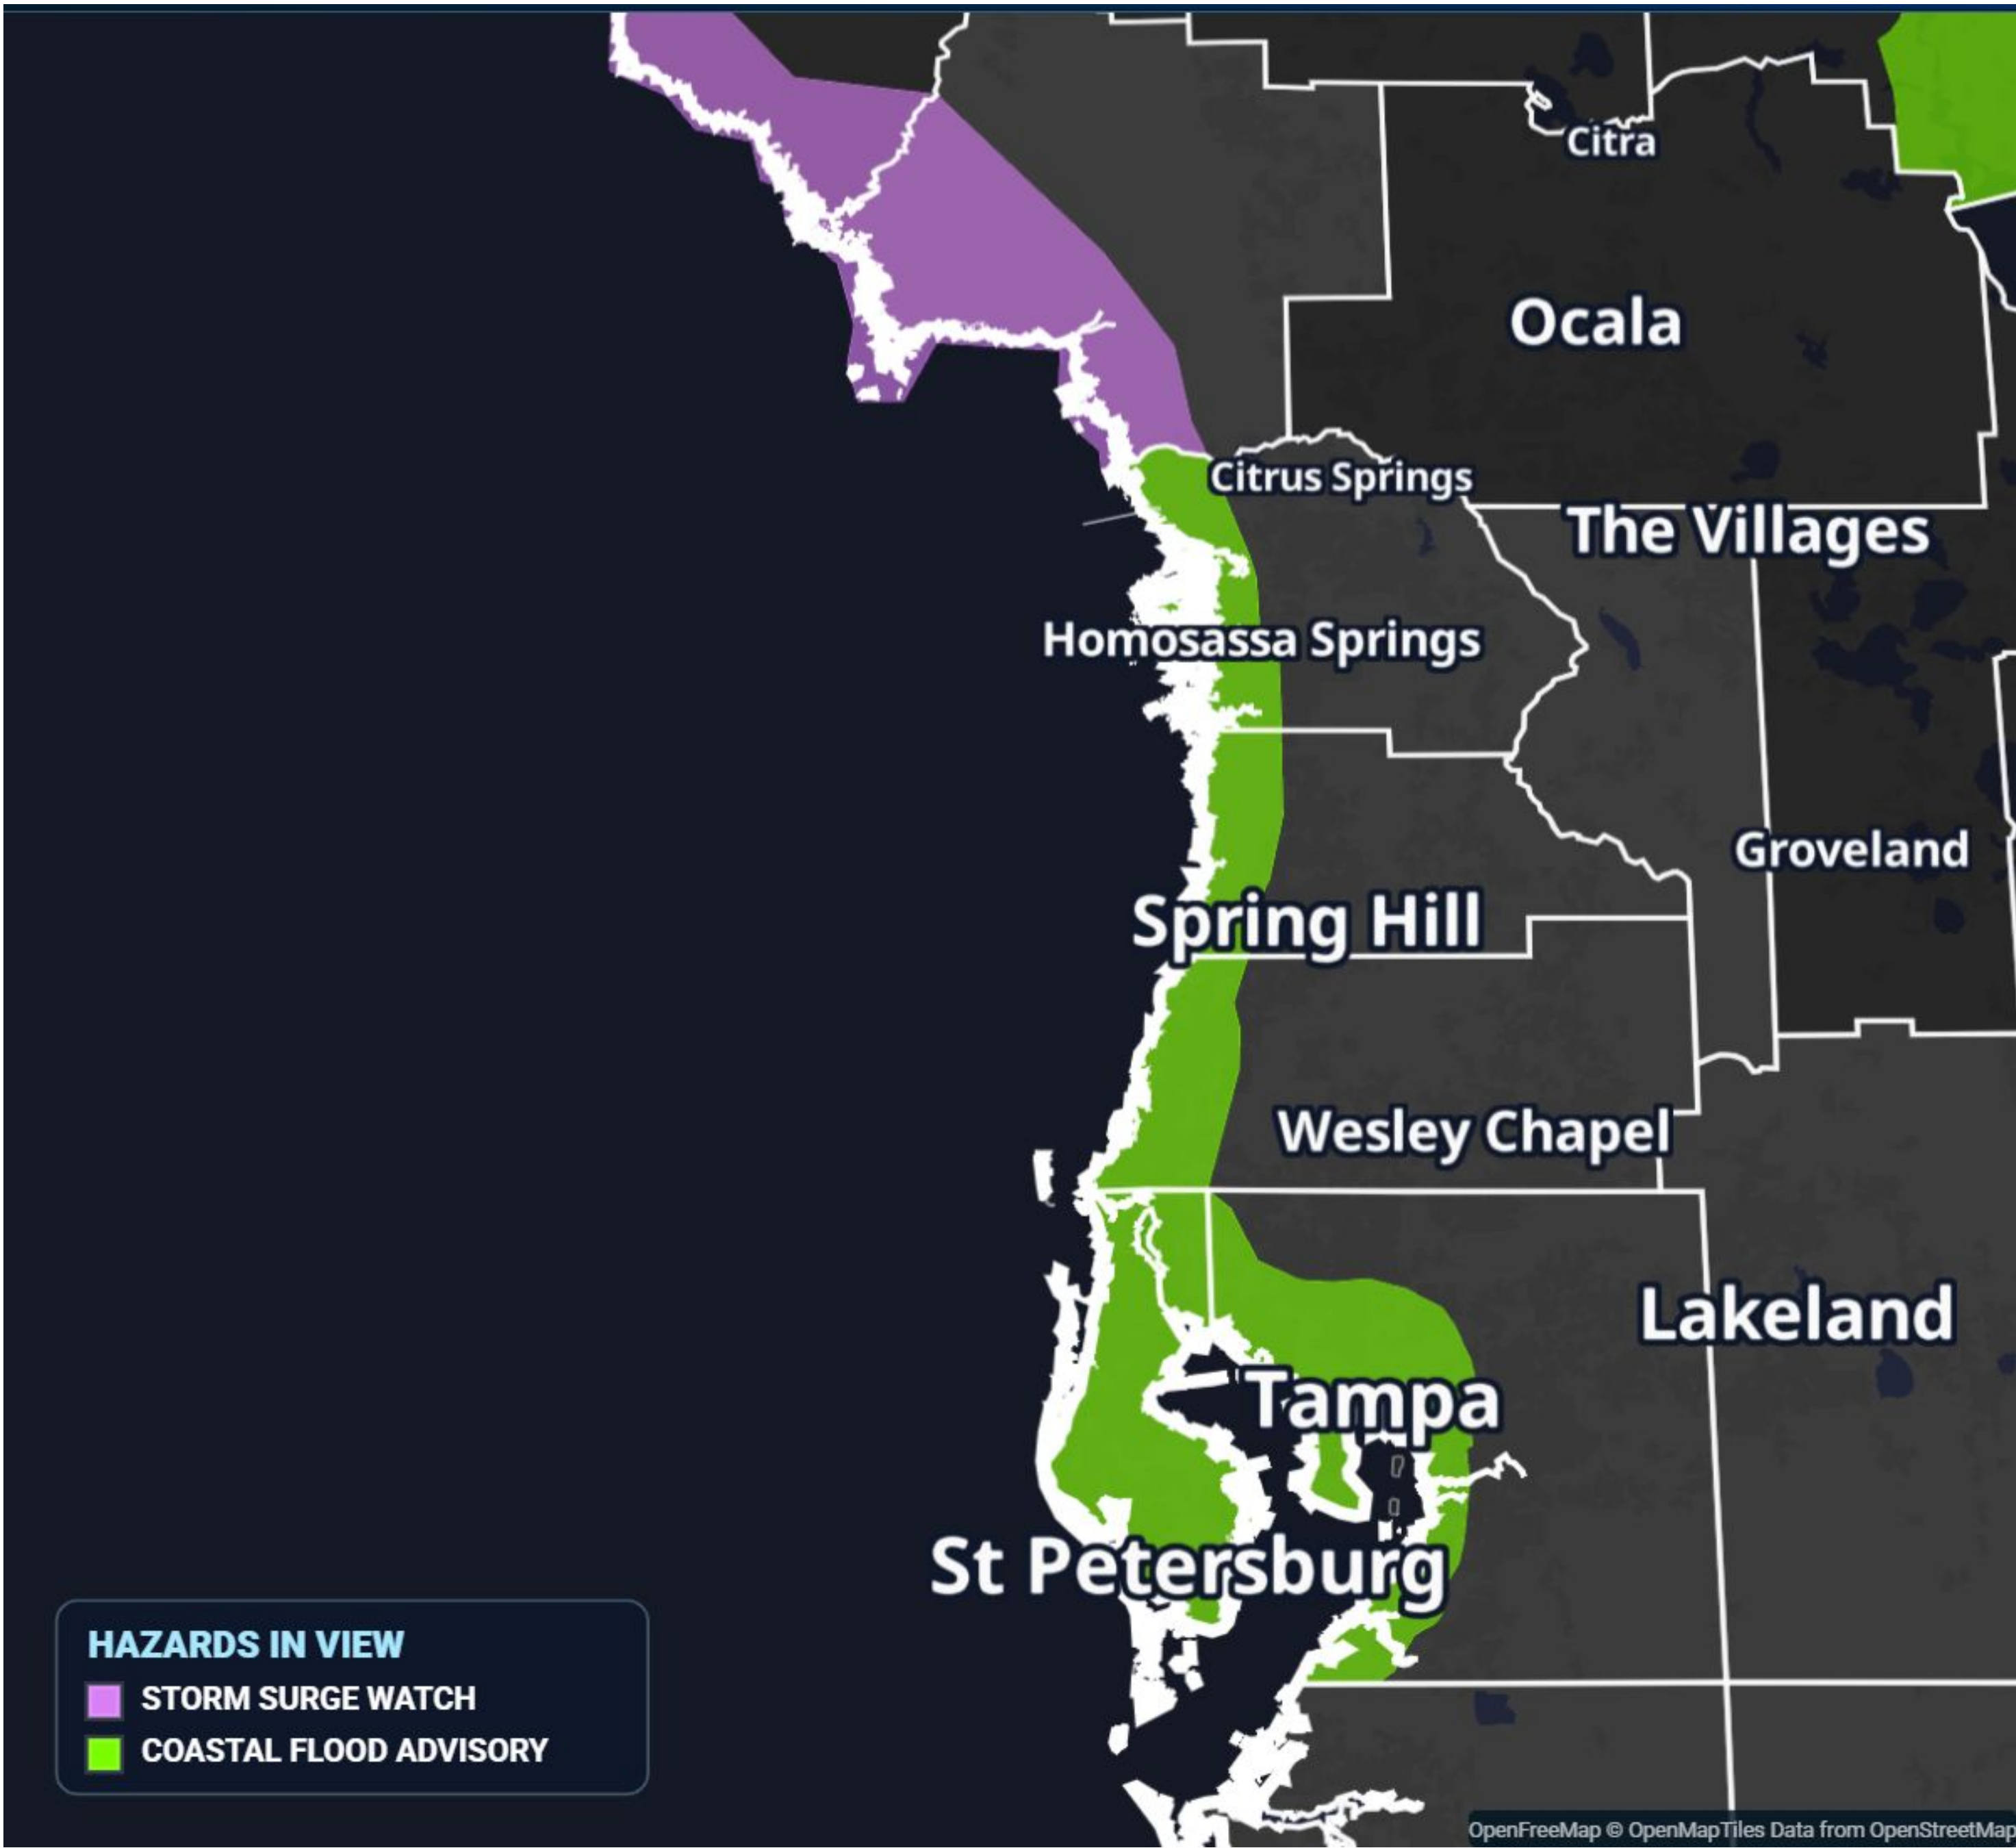

HAZARDS & IMPACTS	- Storm Surge Watch for Levy Co. for surge up to 4 ft. - Coastal Flood Advisory for higher than normal tides (up to 3ft) possible south through Tampa Bay - A Flood Watch is in effect from Manatee Co north, including Sumter Co.
ADDITIONAL INFORMATION	- Latest tropical system forecasts: https://www.nhc.noaa.gov/ - Marine weather page: https://www.weather.gov/tbw/marinecwf
NEXT BRIEFING	By 12PM EDT
