

Here's this morning's update on Isaias for Inglis, with the changes since yesterday afternoon highlighted below.

CHANGES WITH THIS UPDATE

- Isaias strengthened overnight from 65 to 80 mph and is now a hurricane. This uses the 7 a.m. Central / 8 a.m. Eastern Advisory 7A issued October 8.
- Northern Gulf hurricane and storm surge watches became warnings overnight. The Big Bend coast from Steinhatchee River to Yankeetown remains under a Storm Surge Watch.
- Landfall is still expected late Friday or early Saturday. The 4 a.m. forecast changed little, with a 110 mph peak early Friday and some weakening before landfall. It is still expected to be a dangerous hurricane.

WHAT THIS MEANS FOR INGLIS

Storm Surge Watch for Coastal Levy. The coastal segment from Steinhatchee River to Yankeetown remains at 2-4 feet. This does not mean all inland areas have the same exposure.

Our provisional readiness assessment remains SAVCON 3, Prepare. Confirm staff and contacts, protect records and essential assets, and check drainage, access and response plans. SAVCON is our proprietary local impact and readiness scale, not a hurricane category or an evacuation order.

The attached update includes the current official track and warning map, peak surge graphic, seven-day tropical outlook and rainfall map. Surge ranges are conditional heights above normally dry ground somewhere within each coastal segment, not guaranteed property depths or river levels. The rainfall map covers October 8-13; a refreshed local seven-day curve was unavailable, so yesterday's totals are not presented as current.

We are monitoring the situation and prepared to mobilize immediately once conditions warrant. Please call if you have questions or concerns, or let us know of any flooding, damage or access issues so we can coordinate support.

Thank you,
Scott

WEATHER & READINESS

INGLIS FLORIDA

Rainfall. Coastal impacts.
Tropical development. Ready to respond.

OCTOBER 8, 2026 | 7 AM CDT / 8 AM EDT UPDATE | FLORIDA

CHANGES WITH THIS UPDATE

Isaias strengthened overnight from 65 to 80 mph and is now a hurricane. Northern Gulf watches became warnings; the Big Bend surge watch remains. Landfall is expected late Friday or early Saturday. Complete protective preparations today.

SAVCON 3 / 5 | PREPARE

SAVCON = Savinacious Condition: our proprietary scale of local impact severity and likelihood.

PREPARE: Confirm staffing, protect records and assets, check access and mobilization plans, and follow official directions.

IMPACT REPORTS & LOCAL FOCUS

CURRENT WATCHES & WARNINGS

STORM SURGE WATCH

Coastal Levy; inland river impacts vary. Regional coastal surge remains 2-4 ft.

Confirm staff, protect records and assets, and check waterfront facilities, drainage and access. Please share any flooding, damage or access concerns.

- 1 Ready: stay ready. 2 Monitor: follow updates.
- 3 Prepare: ready people, assets and response.
- 4 Protect: shelter safely. 5 Emergency: follow evacuation orders.

TROPICAL UPDATE & SEVEN-DAY OUTLOOK

8 AM EDT OUTLOOK | ISAIAS ACTIVE

7 AM CDT Advisory 7A: 80 mph; ENE 9 mph; 975 mb. Landfall late Friday or early Saturday. No new cyclone formation expected in seven days.

TROPICAL SUMMARY

4 AM NHC model discussion: physical models remain farther west than AI guidance. Official track changed little; peak 110 mph early Friday, then some weakening but a dangerous hurricane at landfall.

RAINFALL | CURRENT OUTLOOK

NHC storm corridor: 3-7 inches, locally 10, across the central Gulf Coast Friday through the weekend. Amounts in each community depend on the track. The attached WPC map shows forecast accumulation October 8-13. A refreshed local seven-day curve and verified recent rain total were unavailable; previous totals are not presented as current.

THE WEEK AHEAD | OCTOBER 8-15

TODAY

Prepare for repeated rain, coastal flooding and access impacts.

FRI-SAT

Tropical rain and coastal hazards depend on track; follow alerts.

SUN-TUE

Rain should ease early next week; check assets when safe.

TRACK & WIND WARNINGS

7 AM CDT INTERMEDIATE ADVISORY 7A | OCTOBER 8, 2026

STORM SURGE WATCH

Coastal Levy; inland river impacts vary. Regional coastal surge remains 2-4 ft.

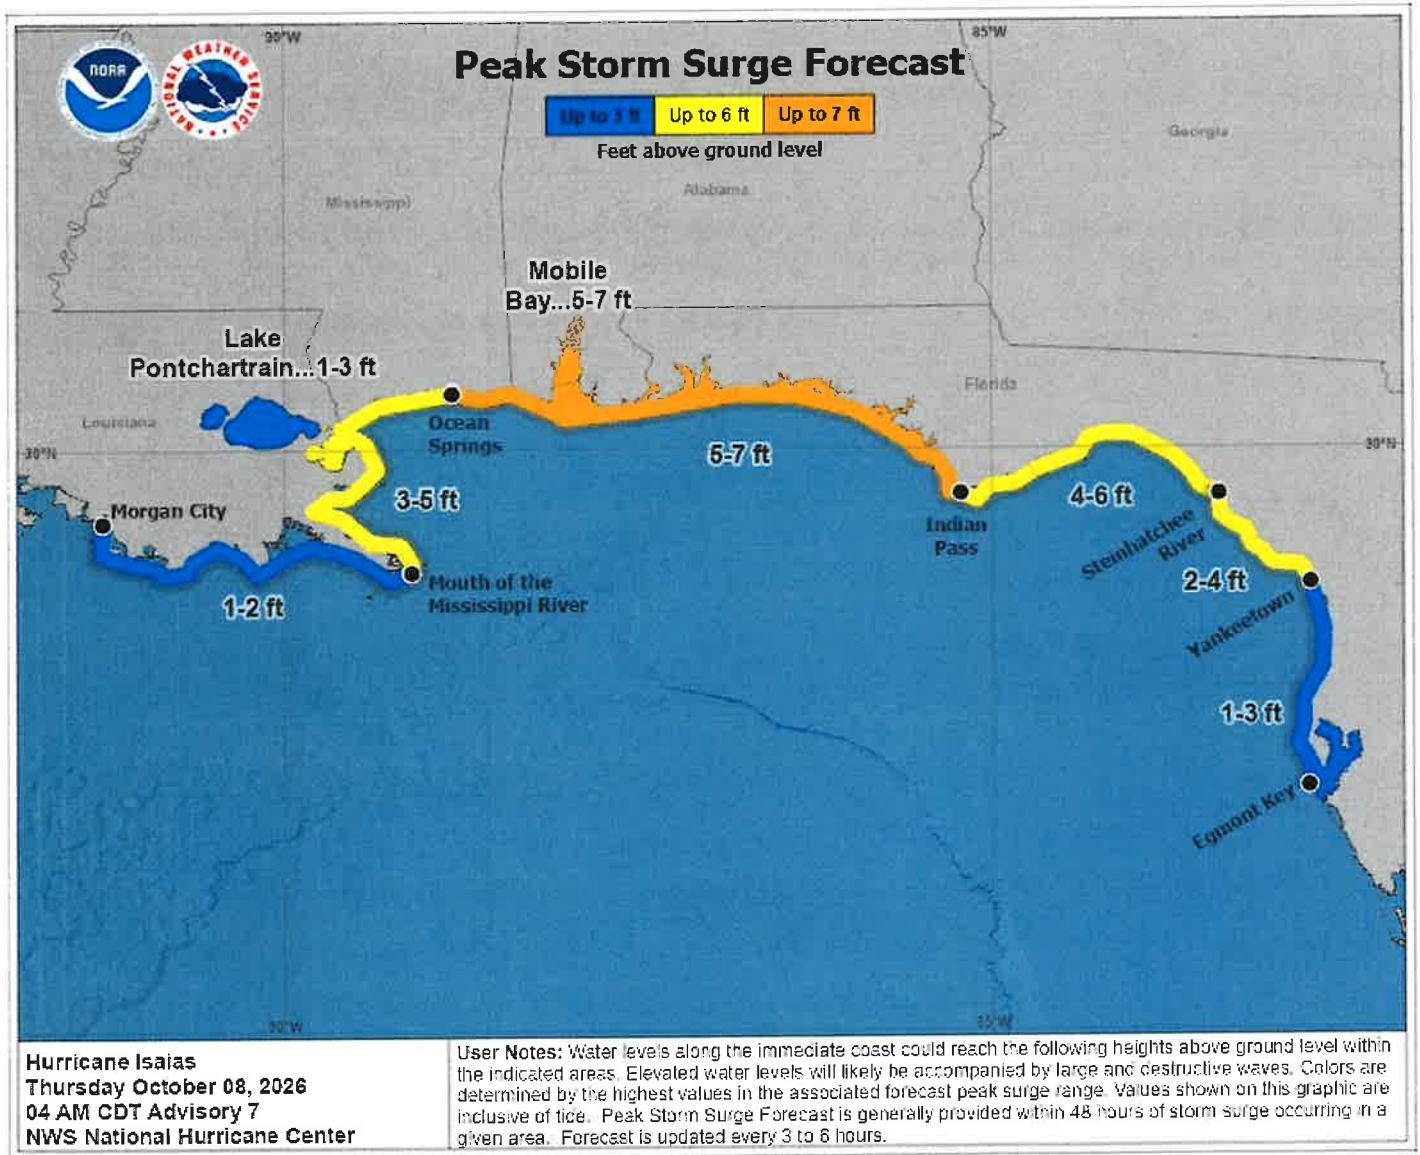

The cone concerns the storm center. Wind, rain and surge can occur outside the cone.

PEAK STORM SURGE

4 AM CDT ADVISORY 7 | OCTOBER 8, 2026

STORM SURGE WATCH

Coastal Levy; inland river impacts vary. Regional coastal surge remains 2-4 ft.

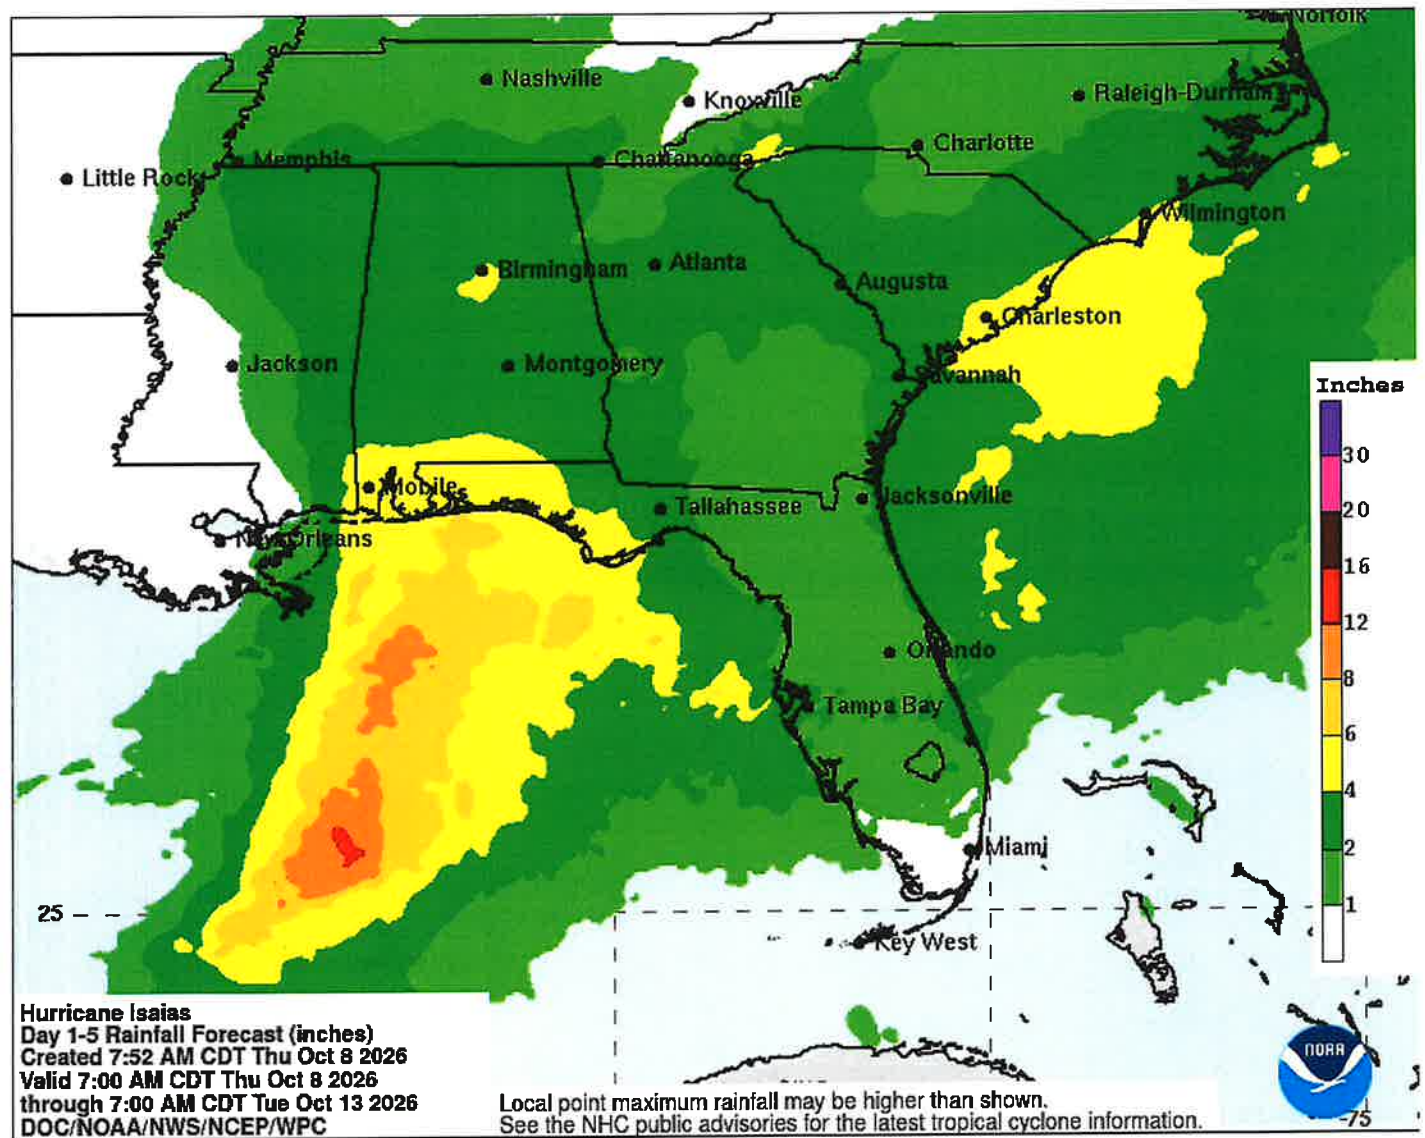

Conditional coastal heights above normally dry ground if peak surge coincides with high tide. These are not property depths or river-level predictions.

RAINFALL ACCUMULATION

WPC CREATED 7:52 AM CDT OCTOBER 8 | OCTOBER 8, 2026

STORM SURGE WATCH

Coastal Levy; inland river impacts vary. Regional coastal surge remains 2-4 ft.

Forecast accumulation: 7 AM CDT October 8 through 7 AM CDT October 13. This is a five-day map, not a seven-day curve; observed prior rainfall is not added.
